

GITREX

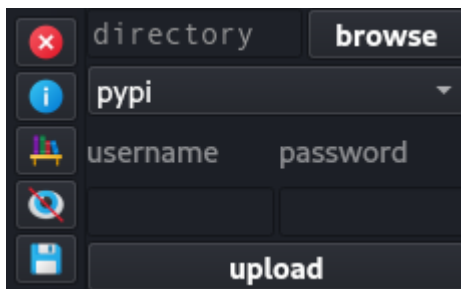

REPOSITORY UPLOAD MANAGER

REFERENCE MANUAL

OVERVIEW

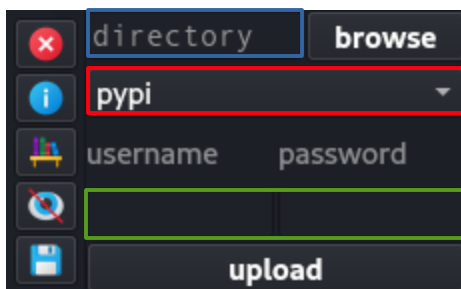

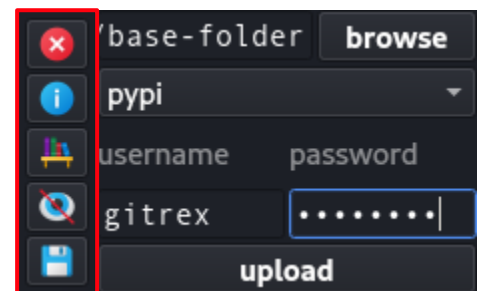

Gitrex is a Graphical User Interface (GUI) application that simplifies and speeds up repository uploads.

SYSTEM AND USAGE

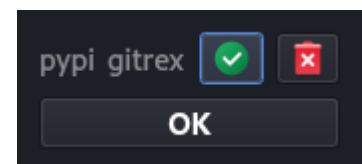

This is a preview of the Gitrex Application. Consisting of the Toolbar and Workspace. Gitrex allows you to view password, save upload information for easy reference when you want to upload an update of similar project. View, Use or Delete saved information. Gitrex has a super simple GUI.

The portion marked is the Toolbar. The first button is the **EXIT**. It can be used to close the application. The second button is **INFO**, which can be used to view the applications details. (Author, Version, About). The third button is **LIBRARY**. The Library button is used to access saved data window. The forth button is used to toggle password view (making password visible or invisible). The last button is used to save upload data for future reference.

The blue section marks the folder or directory that directly contains your “**setup.py**” file. The red section is the repository you want to upload your project to. The green section is the login details of the repository you want to upload to. That is Authentication and Gitrex does not take any login details. After filling all the required input boxes, you can now upload or save the data.

This is the LIBRARY window. In this window, you can either use or delete details you’ve saved. Details will remain saved as long as you want them. Click OK if you want to close the window.

NOTE: Install twine first using “pip install twine”
